Program or System Name (as shown in SMART):		REGION 5 > VBA > AITC > Benefits Enterprise Platform			
OMB Unique System / Application / Program Identifier (UPID #): (AKA:)		029-00-03-00-01-1015-00			
Description of System/ Application/ Program : "must match what is stated in System Security Plan (SSP)"		The Benefits Enterprise Platform (BEP) GSS is a web based Enterprise Architecture (EA) General Support System (GSS) that provides service delivery platforms such as web based technologies and service oriented architectures for VBA business line applications. The VBA business lines consist of but are not limited to the following: (1) Compensation and Pension; (2) Education; (3) Vocational Rehab and Employment; (4) Insurance and; (5) Loan Guaranty. Each of these business lines is supported by applications that rely on BEP to provide services. BEP provides support services that integrate VBA business lines applications and databases that differ in technologies, do not share common services, cannot take advantage of web-services, or are not web-based. BEP provides a standardized web based platform for business line applications that have been re-coded/redeveloped into a unified web based enterprise architecture. The web based enterprise architecture allows for better compatibility, information security, interface with other applications, and compatible access to the corporate database. WSMS, FOCAS and VONAPP are (3) minor applications presently supported within the Benefits Enterprise Corporate Environment. Since BEP is responsible for the (3) minor applications, all the security controls for BEP also apply to the minor applications. BEP is a general support system and does not store or process any Personally Identifiable Information (PII).

Based upon NIST 800-60, volume II; List the information data types chosen as a basis for your FIPS 199 System Categorization.

Answer: Collection source & methods, Controls to mitigate misuse of information, Provisions of consent & privacy notice, and VA 6500 & Nist 800-53 security controls.

**Availability Assessment:** If the data being collected is not available to process for any reason what will the potential impact be upon the system or organization? (Choose One)

The potential impact is **high** if the loss of availability could be expected to have a severe or catastrophic adverse effect on operations, assets or individuals.

The potential impact is **moderate** if the loss of availability could be expected to have a serious adverse effect on operations, assets or individuals.

The potential impact is **low** if the loss of availability could be expected to have a limited adverse effect on operations, assets or individuals.

**Integrity Assessment:** If the data being collected has been corrupted for any reason what will the potential impact be upon the system or organization? (Choose One)

The potential impact is **high** if the loss of integrity could be expected to have a severe or catastrophic adverse effect on operations, assets or individuals.

The potential impact is **moderate** if the loss of integrity could be expected to have a serious adverse effect on operations, assets or individuals.

The potential impact is **low** if the loss of integrity could be expected to have a limited adverse effect on operations, assets or individuals.

**Confidentiality Assessment:** If the data being collected has been shared with unauthorized individuals what will the potential impact be upon the system or organization? (Choose One)

The potential impact is **high** if the loss of confidentiality could be expected to have a severe or catastrophic adverse effect on operations, assets or individuals.

The potential impact is **moderate** if the loss of confidentiality could be expected to have a serious adverse effect on operations, assets or individuals.

The potential impact is **low** if the loss of confidentiality could be expected to have a limited adverse effect on operations, assets or individuals.

The controls are being considered for the project based on the selections from the previous assessments? The VA's risk assessment validates the security control set and determines if any additional controls are needed to protect agency operations. Many of the security controls such as contingency planning controls, incident response controls, security training and awareness controls, personnel security controls, physical and environmental protection controls, and intrusion detection controls are common security controls used throughout the VA. Our overall security controls follow NIST SP800-53 moderate impact defined set of controls. The system owner is responsible for any system-specific issues associated with the implementation of this facility' common security controls. These issues are identified and described in the system security plans for the individual information systems.

Tab 5 - Cell F4 (Internal Sharing: VA Organization):

Shared data includes any veteran data relating to benefits provided by Federal, State, and Local organizations. The system shares information with all of its VA business partners, federal agencies, state agencies and local agencies in regard to confidential business information, Privacy Act and certain information that is subject to confidentiality protections. VBA has emplaced strict control measures to prevent the inadvertent or deliberate release of information to non-authorized personnel.

Explain how collected data are limited to required elements: Information is collected primarily on defined forms and entered to specific fields of database records. The required veteran's data is stored within the databases, which support the individual claim or claims the veteran has been granted. The LAN accesses these databases to retrieve the data.

How is data checked for completeness?

Answer: Data are checked by system audits, manual verifications and annual questionnaires through automated veteran letters from the Regional Offices processing the veteran claims. These letters ask specific questions for verification based on the existing entitlement or benefit that the veteran is receiving. For example, data such as monthly rates of compensation and pension are updated on an annual basis, other data is updated as a result of returned mail, or returned direct deposits, or through contact with claimants after a significant event affecting their entitlement or benefit.
