

<u>Welcome to the PIA for FY 2012!</u>	
Congress passed the E-Government Act of 2002 to encourage the use of Web-based Internet applications or other information technology by Government agencies, with the intention of enhancing access to government information and services and increasing the effectiveness, efficiency, and quality of government operations.	<u>Macros Must Be Enabled To Use Full Functionality For This Form Template!</u>
	Microsoft Office 2003: To enable macros, go to: 1) Tools > Macros > Security - Set to Medium; 2) Click OK; 3) Close the file and when reopening click on <u>Enable Macros at the prompt</u> . Or 1) When file opens click on <u>Enable Macros at the prompt</u> .
To combat public concerns regarding the disclosure of private information, the E-Government Act mandated various measures, including the requirement that Federal agencies conduct a Privacy Impact Assessment (PIA) for projects with information technology systems that collect, maintain, and/or disseminate "personally identifiable information" of the public. Personally identifiable information, or "personal information," is information that may be used to identify a specific person.	Microsoft Office 2007: To enable macros, go to: 1) Office Button > Prepare > Excel Options > Trust Center > Trust Center Settings > Macro Settings > Enable All Macros; 2) Click OK
The Privacy Act and VA policy require that personally identifiable information only be used for the purpose(s) for which it was collected, unless consent (opt-in) is granted. Individuals must be provided an opportunity to provide consent for any secondary use of information, such as use of collected information for marketing.	Final Signatures
	Final signatures are digitally signed or wet signatures on a case by case basis. All signatures should be done when all modifications have been approved by the VA Privacy Service and the reviewer has indicated that the signature is all that is necessary to obtain approval.
Directions:	Privacy Impact Assessment Uploaded into SMART
VA 6508 is the directive which outlines the PIA requirement for every System/Application/Program. If you find that you can't click on checkboxes, make sure that you are: 1) Not in "design mode" and 2) you have enabled macros.	All PIA Validation Letters should be mailed to Christina.Pettit@va.gov to receive full credit for submission.

Roles and Responsibilities:	Schedule FY 2012 : http://www.privacy.va.gov/PRIVACY/Privacy_Impact_Assessment.asp
Roles and responsibilities for the specific process are clearly defined for all levels of staff in the VA Directive 6508 referenced in the procedure section of this document.	
a. Privacy Officer is responsible for the overall coordination and review of the PIA to ensure compliance with VA Directive 6508	
b. Records Officer is responsible for supplying records retention and deletion schedules	
c. Information Technology (IT) staff responsible for the privacy of the system data will perform a PIA in accordance with VA Directive 6508 and to immediately report all anomalies to the Privacy Service and appropriate management chain.	
d. Information Security Officer (ISO) is responsible for assisting the Privacy Officer and providing information regarding security controls.	
e. Chief Information Officer (CIO) is responsible for ensuring that the systems under his or her jurisdiction undergo a PIA. This responsibility includes identifying the IT systems; coordinating with the Privacy Officer, Information Security Officer, and others who have concerns about privacy and security issues; and reviewing and approving the PIA before submission to the Privacy Service.	
Definition of PII (Personally Identifiable Information)	
Personally Identifiable Information (PII) is —any information about an individual maintained by an agency, including (1) any information that can be used to distinguish or trace an individual's identity, such as name, social security number, date and place of birth, mother's maiden name, or biometric records; and (2) any other information that is linked or linkable to an individual, such as medical, educational, financial, and employment information.	
Examples of PII include, but are not limited to:	
• Personal identification number, such as social security number (SSN), passport number, driver's license number, taxpayer identification number, or financial account or credit card number	
• Address information, such as street address or email address	
• Personal characteristics, including photographic image (especially of face or other identifying characteristic), fingerprints, handwriting, or other biometric data (e.g., retina scan, voice signature, facial geometry)	
• Information about an individual that is linked or linkable to one of the above (e.g., date of birth, place of birth, race, religion, weight, activities, geographical indicators, employment information, medical information, education information, financial information).	
Organizations should minimize the use, collection, and retention of PII to what is strictly necessary to accomplish their business purpose and mission.	
A "routine use" is a Privacy Act discretionary authority published in the Federal Register that permits VA to disclose information or records from a Privacy Act-protected record without the patient's prior signed authorization. A "routine use" permits the:	
(1) Release of PHI only when disclosure is also authorized by other applicable legal authorities, including 45 CFR Parts 160 and 164;	
(2) Release of drug or alcohol abuse, HIV, or sickle cell anemia medical information only when the disclosure is also authorized by 38 U.S.C. 7332.

The controls are being considered for the project based on the selections from the previous assessments? The minimum security requirements for our high impact system cover seventeen security-related areas with regard to protecting the confidentiality, integrity, and availability of VA information systems and the information processed, stored, and transmitted by those systems. The security-related areas include: access control; awareness and training; audit and accountability; certification, accreditation, and security assessments; configuration management; contingency planning; identification and authentication; incident response; maintenance; media protection; physical and environmental protection; personnel security; risk assessment; systems and services acquisition; system and communications protection; and system and information integrity. Our facility employs all security controls in the respective high impact security control baseline unless specific exceptions have been allowed based on the tailoring guidance provided in NIST Special Publication 800-53 and specific VA directives.
